Information Security Assessment

Cyber Attacks = Business Risk. Prepared?

Scope of Assessment

Businesses must conduct a comprehensive and thorough assessment of the potential vulnerabilities to the confidentiality, integrity and availability of all confidential information, such as Personally Identifiable Information (PII). Such assessments must be conducted on a regular schedule, and best practice in the industry is to complete this exercise annually.

The scope of the assessment must also include a technical vulnerability assessment. ecfirst's Technical Vulnerability Assessment is divided up into two (2) distinct areas of analysis and **performed entirely remotely**.

- External Assessment (performed remotely)
 - Up to eight externally accessible IP addresses are scanned for vulnerabilities
 - One (domain tested)
 - One website/application anonymously crawled/scanned for vulnerabilities
- Firewall Assessment (performed remotely)
 - Review of one firewall configuration to identify best practice adherence

ecfirst documents all security issues found in the *bizSHIELD*[™] Risk Assessment report. In addition to including the findings and the Corrective Action Plan (CAP), the *bizSHIELD*[™] report also contains an Executive Action Plan (EAP) that outlines achievable goals and milestone dates for management or executive attention.
