9:15-10:00	<b>A Brief History of Cyber Attacks: Past Events predict Future Disruptions!</b>  Presenter: Uday Ali Pabrai, CEO, ecfirst	During this brief, you will: <ul style="list-style-type: none"> <li>• Walk through key cyberattacks, from StuxNet to Mirai, WannaCry &amp; more</li> <li>• Analyze the lifecycle approach associated with disruptive cyber events</li> <li>• Assess application of cybersecurity frameworks to mitigate business risk</li> <li>• Step through core components of risk analysis &amp; vulnerability assessments to discover real links</li> <li>• Examine steps for establishing a comprehensive cybersecurity program</li> </ul>
10:00-12:00	<b>The Cybersecurity Skills Shortage: Practitioners to Managers</b>  Facilitator: To be determined. Check back for an update!	
12:00–13:30	<b>Private Lunch</b>	

13:30—15:30	<b>Your Journey to CISO-ship (Includes scenarios/incidents)</b>	The CISO role has been (and still is) filled by people ranging from all levels (ranks) of the company. When shifting from operational responsibilities (as targets get more widespread) to a leadership (C-Level) issues, the problem is finding people with the right skill set. This is where the discussion of essential CISO skill sets come into play. Mr. Lee will take the group through a discussion on the identity of a CISO, and what skills—from technical to leadership—are necessary for a successful security organization.
	Facilitator: Han Ther Lee, Cybersecurity Principal Advisor, DXC Technology	
15:30—15:45	<b>Refreshment Break</b>	
15:45—16:45	<b>The Business of Data Protection</b>	The General Data Protection Act is a complex regulation involving various parties of an organization. Principles of data protection must be satisfactorily met so the entire act will fall into place. A Data Protection Officer (DPO) is not an entirely new concept and several countries have already implemented similar types of functions to address data privacy. Nevertheless, not many organizations have appointed DPO. This discussion is aimed to answer the question, “Can CISO be a Data Protection Officer to look after the legal /compliance requirements, provide data governance and lead technology beside their role as an information security strategist?”
	Facilitator: Frank Chin, Chief Practice Advisor, ITGRC Asia	
16:45—17:00	<b>CSX Program Preview and Wrap-up</b>	
		ISACA will introduce its newest training program—the CSX Training Platform—that offers hands-on skills instruction and evaluation for all users.
